Invisalign

Ilfracombe Dental Practice

"No wires no fuss"

How it works

When Invisalign pioneered the world's first clear aligners, they changed so much more than how people straighten their teeth.

Each feature is designed to reveal the smile that you deserve.

Removable, comfortable and nearly invisible.

Moves like no other

Only Invisalign clear aligners use SmartTrack technology. SmartTrack is a clinically proven material that controls tooth movement. It is engineered to treat a wide range of tooth straightening issues. It is highly elastic, which improves aligner fit and offers greater comfort.

Made for your mouth

Each set of aligners is custom-made using state-of-the-art 3D printing technology, moving your teeth gently and efficiently.

The complete experience

ClinCheck 3D technology digitally maps your entire Invisalign journey, so Invisalign patients can see what their new smile is predicted to look like before treatment even begins.

The Invisalign treatment process is as straightforward as it is technically advanced.

Free Invisalign consultation

Make an appointment for your free Invisalign consultation. Fill in your smile assessment on the back of this form and bring it in as an aid memoire. Your mouth will be checked for signs of active decay or gum disease which must be addressed first. If our dentists think that your case is suitable, they will then need photographs of your mouth so that it can be assessed by an Invisalign consultant. You can ask us any questions regarding Invisalign. We can provide you with an estimate at this point but we would rather provide you with a proper quotation once we have heard back from the Invisalign consultant.

The consultant responds within a week to verify that your treatment outcomes are possible. We will then book you in for your first proper Invisalign assessment. At this appointment, we will take photos, x rays and dental impressions of your upper and lower teeth. These records will be used to create a ClinCheck 3D treatment plan, just for you. This assessment is £90 but is included in the overall quotation if you decide to proceed with the Invisalign plan.

On the second appointment we will have a ClinCheck 3D treatment plan. This plan is a model of your mouth at different stages of your Invisalign treatment. It will highlight where small attachments will be placed, whether enamel shaping is required and how many aligners it will take to achieve the smile you want. Only once you are happy with the plan will we proceed. Bring in a partner, friend or family member with you if you need a second opinion. We will provide you with a quotation at this point.

After being custom-made and shipped to us, you'll receive a series of aligners to wear every day and change at home – on average 1-2 weeks.

You'll visit us around every 6-8 weeks to monitor progress and receive new aligners. After finishing your treatment plan, retainers will be required to maintain your new smile.

You can comfortably wear your aligners for the recommended 22 hours a day. And because the aligners are removeable, it's easy to maintain your regular oral hygiene and enjoy your usual diet.

As you progress, replacing your aligners every 1-2 weeks, people may notice a gradual change in your smile. Taking a selfie every week on the same day will help you see the progress you are making.

Worried about cost ?

We offer a monthly payment scheme that spreads the cost after a one off payment, over ten months.

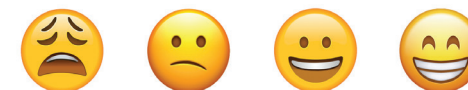

Smile Evaluation

The smile you've always wanted

Patient Name: _____

Date: _____

On a scale of 1-10, how would you rate your smile?
